Purpose

IVA cage(ACIF) is Cervical Interbody fusion devices used to provide structural stability in skeletally mature patients with cervical disc disease at one level from the C3-C4 disc to the C7-T1 disc

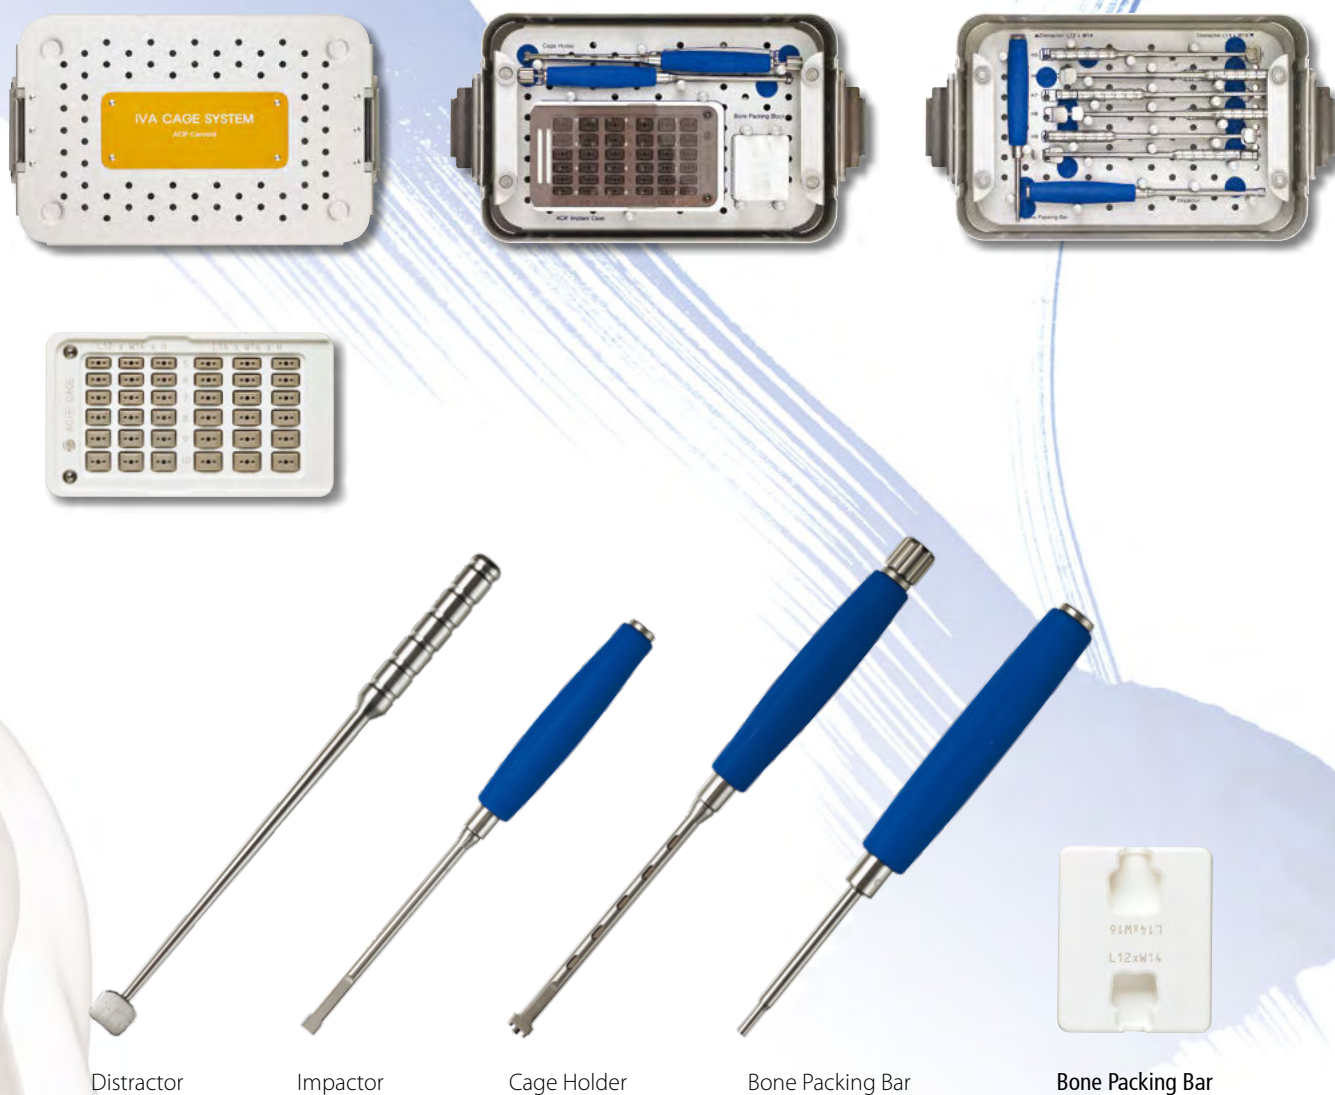

Anterior Cervical Interbody Fusion Cage

- **Large Graft Window:** Provides large window for maximum graft volume
- **Radiographic Markers:** Provides visual feedback for proper placement by Tantalum (ASTM F560)
- **Anatomic Designs:** Accommodate various patient anatomies while resisting migration

IVA CAGE

IVA Lumbar Cage

Purpose

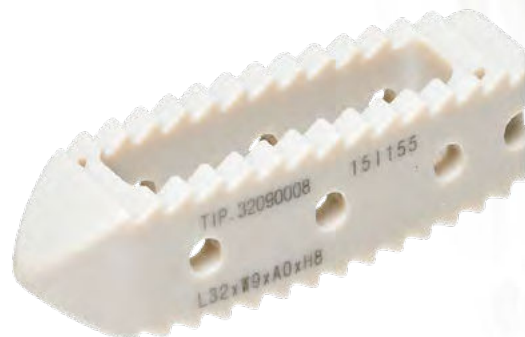

IVA cage is Lumbar Interbody fusion devices used to provide structural stability in skeletally mature patients with lumbar disc disease at one or two level from the L2~S1 disc

Description

IVA cage(PLIF, TLIF, DLIF, ALIF) is inserted through an Lumbar approach(posterior, Transforaminal, anterior), and are available in various heights and geometric options to fit the anatomical needs of a wide variety of patients. These cages are to be filled with bone graft material. Protrusions on the superior and inferior surfaces of each device grip the endplates of the adjacent vertebrae to resist expulsion.

PLIF

TLIF (Bullet)

TLIF (Curved)

Indications

IVA cage (PLIF, TLIF, DLIF, ALIF) is Lumbar Interbody fusion devices used to provide structural stability in skeletally mature patients with lumbar disc disease at one or two level from the L2~S1 disc. Lumbar disc disease is defined as intractable radiculopathy and/or myelopathy with herniated disc and/or osteophyte formation on posterior vertebral endplates producing symptomatic nerve root and/or spinal cord compression confirmed by radiographic studies. This Lumbar device is to be used in patients who have had six months of non-operative treatment.
